Attached is the list of fluids lost or destroyed on location.

We reviewed again and the ethylene glycol estimate was revised down from 3750gal to 2960gal. I initially overestimated the amount in the radiators.

The FR-66 total is only the amount assumed to be lost on location or burnt up, as I have backed out the volume we recovered. Some was also sucked up with a vac truck, which I don't have that estimate and would still need backed out of the attached number.

If you have any questions, let me know.

Thanks,

Kurt R. Harpold Jr.

Subject: Chemical Reconciliation

Kurt,

The FOSC (Federal EPA) is requesting your final chemical reconciliation that was put together by Halliburton.

Please include the radiator fluid as well as an estimate of the amount of diesel & hydraulic oil that was in the equipment.

He would like that today, please.

Best regards,

Glen Anthony
